APPENDICES

SUP **AFCP/6067A13/3**

RESOLUTION 661 (WRC-19)

Examination of a possible upgrade to primary status of the secondary allocation to the space research service in the frequency band 14.8-15.35 GHz

Reasons:

Given that the methods do not prevent harmful interference to the incumbent services and do not protect systems of primary services in the frequency band 14.8-15.35 GHz. This position may change if usage conditions can ensure incumbent services are protected from harmful interference.

ATU Administrations are invited to continue to consider developments under this agenda item and to examine the possible upgrade of SRS services in the 14.8-15.35 GHz band while protecting the primary services in this band, with a view to possibly support either Method E1 or E2 upon satisfying the requirement for protection of Fixed and Mobile services as well as Radio Astronomy Services.

Note that the Administration of Tunisia adopts a different Method for agenda item 1.13 than the adopted AFCP without opposition to the AFCP.
